

HotBlack Smartwatch – View Live Soccer Scores!

With the 2014 World Cup in Brazil underway, the best soccer teams are still battling it out to be crowned the world champion. True football / soccer fans would love a way to follow the score of a game in progress. Take a look at the new Hotblack smart watch.

British physicist Richard Hoptroff and his company HotBlack London designed a luxury watch that not only tells the current date and time, but also the scores of any live soccer match in analog fashion.

The HotBlack Smartwatch is 44mm in diameter and made from 316L brushed stainless steel that's been coated in black PVD. The result is a tough watch that's high corrosion resistant. Although still a prototype, the new luxury watch also features a sapphire crystal glass that is scratch-proof.

The watch offers clean numbers and a simple black-and-white contrasting, color scheme.

The HotBlack Smartwatch is water resistant up to 50 meters or 5 atmospheres. The watch's Lithium battery has a life of up to 3 years.

The Hotblack watch features four different dials. Each watch dial provides a different function. The primary dial presents the actual time during the day. The other three sub-dials offer various tasks that depend on if a soccer match is underway. Hotblack operates by transmitting data via Bluetooth technology. Just press of a button to see the live score of a soccer game plus the remaining time.

Experienced watchmaker and designer Richard Hoptroff was quoted, "In today's society, watches have become items of luxury, rather than utility. Keeping that in mind, we constructed Hotblack from some of the highest quality

materials on the planet.”

Hotblack is from Hoptroff London, who are both designers and purveyors of luxurious timepieces. Hotblack launched a Kickstarter campaign today to raise £23,000 GBP (~\$39,000 USD). When available for retail, the luxury watch is expected to be priced at about £990 GBP or \$1,650 USD.
