

# Huf Haus Homes – Where Style and Efficiency Come Together

Courtesy of: Huf Haus

Have you ever dreamed of owning a 100% independent, self contained home that can generate enough energy to power its own heating, cooling and electricity demands?

Well Huf Haus from Germany, has worked very hard to make this dream of mankind come true.

On a yearly basis, Huf Haus builds 150 modular mansions, all over Europe, China, and now Russia. Prices for these luxurious homes start at \$1.5 million.

The German-based company, which is more than 90 years old, is now making its homes available in the United States.

The North American operation is headed up by head architect, Alexander Kolbe.

Mr. Kolbe designs green zero-carbon “of the grid” houses made of glass exterior walls and based on Bauhausian (except for

the pitched roofs made of solar panels.)
